

Real Company Case Study: HR Analytics Using Pandas

Objective:

Analyze employee salary distribution, department performance, and experience trends.

Steps:

1. Load HR dataset using pandas.
2. Clean missing salary and department values.
3. Calculate KPIs such as average salary, attrition risk, and experience bands.
4. Build department - level aggregations and rankings.
5. Export insights for dashboard reporting.

Outcome:

Provides business - ready insights for HR leadership and decision - making.
